

e11

**water saver
- dry soils**

BOURNE
AMENITY

Maximum drought tolerance. Helping to save valuable water resources.

The availability of water for irrigation is likely to be an increasing issue in the future. The E11 mixture utilises the most drought tolerant grass species suitable for the UK climate, tall fescue. Tall fescue has an exceptionally deep root system, which means it can access water that is unavailable to other species. Ideal for urban areas where water usage may be unavailable or restricted.

Overview:

- Contains tall fescue, the most drought tolerant species for the UK climate
- Includes perennial ryegrass for quick establishment
- Very deep root system
- Suitable for areas of very thin, sandy and drought prone soil
- Ideal for areas where water usage is unavailable or restricted

Areas of use:

- Areas of thin, drought prone soil
- Area where water usage is unavailable/ restricted
- Public open spaces
- Urban areas
- Parks
- Mediterranean lawns

IN THE BAG

50% Tall fescue
50% Perennial ryegrass

HOW TO USE IT

Pack Size - 20kg
Sowing rate - 35-50g/m²
Cutting Height - Down to 25mm
