

Coastal lawns and landscapes. Salt and drought tolerance.

The E13 mixture delivers salt and drought tolerance for lawns and green spaces in coastal areas. Coastal areas are often subjected to saline conditions and drought, the species in the E13 mixture have been selected to tolerate these conditions. As well as excellent salt and drought tolerance, the E13 mixture is also durable thanks to the inclusion of perennial ryegrass.

Overview:

- Tolerant of saline conditions found in coastal areas
- Excellent performance on free draining, sandy soils
- Excellent drought tolerance
- Utilises deep rooted species
- Good levels of wear tolerance

Areas of use:

- Coastal areas
- Public open spaces
- Urban areas
- Parks
- Lawns

IN THE BAG

30% Perennial ryegrass
25% Hard fescue
25% Slender creeping red fescue
20% Tall Fescue

HOW TO USE IT

Pack Size - 20kg
Sowing rate - 30-40g/m²
Cutting Height - Down to 25mm
