

## Protecting aircraft by creating an unfavourable habitat for birds.

In aviation one of the greatest dangers is posed by birds striking planes.

The E14 Airfield mixture is formulated to be sown around airfields and maintained as part of a 'Long Grass Management' programme, which involves the grass being maintained to a height of 150mm.

The grasses included in the mixture are ones which have a stiff, upright growth habit that make it difficult for birds to land.

### Overview:

- Creates an unfavourable habitat for birds
- Stiff, upright growth habit deters birds from landing
- Very persistent and tolerant of harsh conditions
- Designed to be used as part of a 'Long Grass Management' programme
- Maintain to a height of 150mm for optimum results

### Areas of use:

- Airfields

## IN THE BAG

**70% Tall Fescue**

**15% Cocksfoot**

**10% Timothy**

**5% Crested Dogstail**

## HOW TO USE IT

**Pack Size - 20kg**

**Sowing rate - 20-30g/m<sup>2</sup>**

**Cutting Height - Maintain to 150mm**
