

The official grass seed specification of the Department for Transport.

The official grass seed mixture for road verges, as specified by the department for Transport. Designed to give fast establishment, be tolerant of harsh conditions and grow in poor quality soils. The inclusion of white clover aids growth on impoverished soils. White clover is a legume which takes nitrogen from the air and returns it to the soil, providing a source of nutrients for the neighbouring grass plants.

Overview:

- The official grass seed specification of the Department for Transport
- Tolerant of harsh conditions
- Suitable for poor soil conditions
- Fast to establish
- Includes white clover to provide a source of nutrients for the grass plants

Areas of use:

- Road verges

IN THE BAG

- 30% Hard fescue
- 25% Perennial ryegrass
- 20% Strong creeping red fescue
- 10% Smooth-stalked meadow grass
- 10% Bent
- 5% White clover

HOW TO USE IT

- Pack Size - 20kg
- Sowing rate - 10-20g/m²
- Cutting Height - Down to 75mm
