ground cover

BOURNE
AMENITY

Rapid establishment and stabilisation of embankments and areas of loose soil.

Formulated to be our best performing mixture when sowing seed on steep banks or areas of loose and unstable soils. The mixture will give rapid germination due to the inclusion of annual ryegrass which will act as a 'nurse crop', giving protection to the other species whilst they establish. The mixture includes a combination of deep-rooted, creeping, drought tolerant and hardwearing species to create an incredibly hardy mixture.

Overview:

- Formulated to be our best performing mixture for establishing steep banks
- Rapid germination from annual ryegrass which acts as a nurse crop
- Creeping and deep-rooted grasses for soil stabilisation
- Very tolerant of harsh conditions
- Available with white clover for impoverished soils, see E16c Embankment and Ground Cover + Clover

Areas of use:

- Embankments
- Areas of loose and unstable soils
- Road verges

IN THE BAG

- 20% Perennial ryegrass
- 20% Strong creeping red fescue
- 15% Annual ryegrass
- 15% Slender creeping red fescue
- 15% Tall fescue
- 10% Hard fescue
- 5% Bent

HOW TO USE IT

- Pack Size - 20kg
- Sowing rate - 25-50g/m²
- Cutting Height - Down to 50mm

(A high sowing rate is steep banks.)
